

Voluntary Carbon Standard Project Description Template

Date of the VCS PD: 4 July 2011

Version of the VCS PD: 2

Only the section 1.12, 1.13, 1.14, 8.1 & 8.2 are to be addressed. For rest of the sections refer to the CDM PDD.

Contents

1	Description of Project:	1
2	VCS Methodology:	3
3	Monitoring:	4
4	GHG Emission Reductions:	4
5	Environmental Impact:	5
6	Stakeholders comments:	5
7	Schedule:	5
8	Ownership:	5

1 Description of Project:

1.1 Project title

Wayang Windu Phase 2 Geothermal Power Project

1.2 Type/Category of the project

Refer to registered PDD section A.4.2

1.3 Estimated amount of emission reductions over the crediting period including project size:

Refer to registered PDD section A.4.4

1.4 A brief description of the project:

Refer to registered PDD section A.2

1.5 Project location including geographic and physical information allowing the unique identification and delineation of the specific extent of the project:

Refer to registered PDD section A.4.1.4

1.6 Duration of the project activity/crediting period:

Refer to registered PDD section A.4.4, C.2.1

1.7 Conditions prior to project initiation:

Refer to registered PDD section A.2

1.8 A description of how the project will achieve GHG emission reductions and/or removal enhancements:

Refer to registered PDD section A.2

1.9 Project technologies, products, services and the expected level of activity:

Refer to registered PDD section A.4.3

1.10 Compliance with relevant local laws and regulations related to the project:

Refer to registered PDD section D.1

1.11 Identification of risks that may substantially affect the project's GHG emission reductions or removal enhancements:

Refer to registered PDD section B.6.1 (risks include unusual circumstances such as natural disasters, conflicts, transmission constraints)

1.12 Demonstration to confirm that the project was not implemented to create GHG emissions primarily for the purpose of its subsequent removal or destruction.

The project activity will reduce 794,832 tCO₂e annually by replacing carbon-intensive grid electricity, which otherwise would have been produced mainly by fossil fuel power plants. In the absence of the project activity, the baseline case is the provision of the equivalent amount of annual power generated mostly by fossil fuel power plants supplied to the grid (the JAMALI Grid) to which the project is connected.

Therefore, it is confirmed that the project was not implemented to create GHG emissions primarily for the purpose of its subsequent removal or destruction.

1.13 Demonstration that the project has not created another form of environmental credit (for example renewable energy certificates).

The project activity is a registered CDM project (UNFCCC Reference No. 3193), which was registered on December 2, 2010. As a registered CDM project, the project is able to claim Certified Emissions Reductions (CERs). Any emission reductions generated from the project starting from the registration date will be verified under the CDM as CERs. Any emission reductions generated outside of the CDM (e.g., emission reductions generated prior to the CDM registration date, which do not qualify as CERs) have been generated voluntarily. Through the application of this project under the VCS, those voluntary emission reductions will be validated and verified as VERs. There will not be any overlap or double counting of the emission reductions from the project since there is a clear delineation between when emissions reductions are generated under the CDM and voluntarily.

1.14 Project rejected under other GHG programs (if applicable):

The project is not rejected under any other GHG program the project. The project activity is a registered CDM project (UNFCCC Reference No. 3193), which was registered on December 2, 2010.

1.15 Project proponents roles and responsibilities, including contact information of the project proponent, other project participants:

Refer to registered PDD Annex 1

1.16 Any information relevant for the eligibility of the project and quantification of emission reductions or removal enhancements, including legislative, technical, economic, sectoral, social, environmental, geographic, site-specific and temporal information.):

Not applicable.

1.17 List of commercially sensitive information (if applicable):

The commercially sensitive documents will be provided to the audit team during the validation process.

2 VCS Methodology:

2.1 Title and reference of the VCS methodology applied to the project activity and explanation of methodology choices:

Refer to registered PDD section B.1

2.2 Justification of the choice of the methodology and why it is applicable to the project activity:

Refer to registered PDD section B.2

2.3 Identifying GHG sources, sinks and reservoirs for the baseline scenario and for the project:

Refer to registered PDD section B.3

2.4 Description of how the baseline scenario is identified and description of the identified baseline scenario:

Refer to registered PDD section B.4

2.5 Description of how the emissions of GHG by source in baseline scenario are reduced below those that would have occurred in the absence of the project activity (assessment and demonstration of additionality):

Refer to registered PDD section B.5

3 Monitoring:

3.1 Title and reference of the VCS methodology (which includes the monitoring requirements) applied to the project activity and explanation of methodology choices:

Refer to registered PDD section B.1

3.2 Monitoring, including estimation, modelling, measurement or calculation approaches:

Refer to registered PDD section B.6

3.3 Data and parameters monitored / Selecting relevant GHG sources, sinks and reservoirs for monitoring or estimating GHG emissions and removals:

Refer to registered PDD section B.7.1

3.4 Description of the monitoring plan

Refer to registered PDD section B.7.2

4 GHG Emission Reductions:

4.1 Explanation of methodological choice:

Refer to registered PDD section B.6.1

4.2 Quantifying GHG emissions and/or removals for the baseline scenario:

Refer to registered PDD section B.6.3

4.3 Quantifying GHG emissions and/or removals for the project:

Refer to registered PDD section B.6.3

4.4 Quantifying GHG emission reductions and removal enhancements for the GHG project:

Refer to registered PDD section B.6.3

5 Environmental Impact:

Refer to registered PDD section D

6 Stakeholders comments:

Refer to registered PDD section E

7 Schedule:

Project start date = 4 Mar 2009

8 Ownership:

8.1 Proof of Title:

Star Energy Geothermal (Wayang Windu) Limited (project owner) owns the Wayang Windu Phase 2 Geothermal Power Project. The proof of title for the Project is detailed below through

Legislative Right

Star Energy Geothermal (Wayang Windu) Limited (formerly Magma Nusantara Limited/MNL) has the exclusive right to exploit and utilize geothermal energy in the Wayang Windu allotment through a Joint Operating Contract (JOC) dated 2nd December 1994, as amended on 21st November 2006 between MNL and PT Pertamina Geothermal Energy Persero (formerly Perusahaan Pertambangan Minyak dan Gas Bumi Negara, the Indonesian state-owned oil company) and approved by the Minister of Energy and Mineral Resources of Indonesia. The amended JOC runs for a term of 42 years from the effective date of the JOC, 2nd December 1994, until 2nd December 2036.

MNL has the exclusive rights to sell electricity generated from the project to PT Perusahaan Listrik Negara (PLN) under an Energy Sales Contract (ESC) dated 2nd December 1994 as amended on 21st November 2006 and approved by the Minister of Energy and Mineral Resources of Indonesia. The amended ESC also runs for a term of 42 years from 2nd December 1994 until 2nd December 2036.

Other rights and approvals

The Letter of Approval for the project was issued by the National Committee on CDM (Designated National Authority for the Republic of Indonesia) to Star Energy Geothermal (Wayang Windu) Limited on 8th May 2009.

Ownership of the plant, equipment and/or process generating the reductions/removals

Below is a list of contracts signed between Star Energy Geothermal (Wayang Windu) Limited regarding the construction of the Wayang Windu Phase 2 Geothermal Power Project and purchase of equipment.

Date	Contract	Contracting Parties
11-Jul-05	Purchase contract for Tubular components for geothermal drilling (No. WDA J-0255)	Magma Nusantara Limited (MNL)
30-Jan-07	EPC Contract for power plant and steam pipeline (Contract no. 71510012-OS)	Star Energy Holdings Pte.Ltd

8.2 Projects that reduce GHG emissions from activities that participate in an emissions trading program (if applicable):

Not applicable.
